## Weight Loss Programs

**Weight Loss Shots** Semaglutide & Sermorelin/Glycine. These peptides work together to improve hormonal imbalance, reduce insulin resistance, increase muscle mass, and reduce fat.

**Ultimate Contour™** is a low frequency ultrasound and radio frequency machine that provides painless results for circumference reduction, cellulite reduction, and skin tightening.

**EMERALD™** Non-invasive pain free laser that releases excess fatty materials. From there, the fat is passed through the body during its natural course of detoxification through the lymphatic system.

**Contour Light™** Combination of red light and infrared light reduces fat cells, similar to deflating a balloon. Particularly effective in targeting stubborn spots, it reduces cellulite, and tightens skin.

Weight loss programs include Blood Panel, 3D Body Scan, and Functional Nutritional Analysis.

Nutrition-only packages also available.
